

Barlow World Agriculture installs UDF fuel filter systems to Massey Ferguson equipment.

Since 2009 all Massey Ferguson tractors have been fitted with UDF fuel filtration systems and users have enjoyed the benefits of Barlow World Agriculture's far sighted decision to protect the machines that they supply in this way.

Users report much greater pulling power and better fuel consumption with these tractors than before. Coupled with reliability and no fuel related down time failures makes for satisfied customers.

Warrentee claims because of fuel system component failures have been illiminated.

Many CLAAS harvesters are also fitted with UDF filtration systems
